Non-Profit Organization Management System – Phase 1 Class Diagram

Client Requirements (collected from users)

CR-01	Recurring monthly donations → *RecurringDonation, DonationFactory*
CR-02	Fundraising campaigns with live progress → *Campaign, CampaignProgressObserver*
CR-03	Anonymous donations → *Donation.anonymous, getDonorDisplayName()*
CR-04	Preferred notification channel per person → *NotificationChannel, NotificationStrategyFactory*
CR-05	Event waiting list when capacity is full → *Event.registerAttendee(), EventRegistration*
CR-06	Skill-based volunteer matching + preferences → *Task.requiredSkills, Volunteer.isQualifiedFor()*
CR-07	Admin CRUD for all lookup tables → *LookupEntity, LookupController, AdminView*

Phase 1 Design Patterns

Singleton	DatabaseManager – one shared DB connection (getInstance())
Factory	DonationFactory, NotificationStrategyFactory – create objects from user input
Observer	Donation / Event notify Admin, Finance, DonorReceipt, Campaign, EventReminder
Strategy	NotificationService switches Email / SMS / Social at runtime
Decorator	Receipts extended with tax info and QR code without subclassing
MVC	view → controller → model packages; BaseController shares the DB
CRUD lookups	6 tables extend LookupEntity; LookupController add/get/list/edit/delete
